

3042853 - SAP S/4HANA On-Premise and SAP S/4HANA Cloud Private Edition: Integration with SAP Build Work Zone, standard edition - Restrictions

Component: XX-SER-REL (Miscellaneous > Service Messages > Business Suite and SAP S/4HANA Release Information), Version: 19, Released On: 02.08.2024

Symptom

Restrictions related to using the SAP Build Work Zone, standard edition as a central entry point for the SAP S/4HANA On-Premise releases.

Other Terms

Restrictions, SAP Build Work Zone, SAP Launchpad Service, standard edition, Central Fiori Launchpad, cFLP, central entry point, SAP S/4HANA 1610, SAP S/4HANA 1709, SAP S/4HANA 1809, SAP S/4HANA 1909, SAP S/4HANA 2020, SAP S/4HANA 2021, SAP S/4HANA 2022, SAP S/4HANA 2023, S/4HANA Cloud Private Edition

Reason and Prerequisites

Restrictions related to using the SAP Build Work Zone, standard edition as a central entry point for the following SAP S/4HANA On-Premise or SAP S/4HANA Cloud Private Edition.

The integration of SAP Build Work Zone, standard edition with SAP S/4HANA based on Content Federation requires Fiori Frontend Server 6.0 with a minimum SPO4. For more information, see SAP Help Portal: [Federation of Remote Content Providers](#)

Note: Check this note for updates on a regular basis.

Solution

Integration with SAP Build Work Zone, standard edition is available starting with SAP S/4HANA On-Premise 1809.

There is a exposure version 2 available to expose the content from SAP S/4HANA On-Premise for the integration with SAP Build Work Zone, standard edition. Exposed apps via using exposure version 2 are launched from SAP Build Work Zone in a standalone (new tab) mode within the shell of SAP S/4HANA launchpad, see details in Note 3345119 - [Expose launchpad content to SAP BTP - Exposure version 2](#).

General Restrictions:

- Integration with the SAP Build Work Zone, standard edition is not available for SAP S/4HANA On-Premise 1511.
- The integration of SAP Build Work Zone, standard edition with S/4HANA versions 1610 and 1709 are only released for test and evaluation purposes.
- SAP Build Work Zone, standard edition is no full equivalent of the SAP Fiori launchpad of SAP S/4HANA On-Premise. Its not expected to have all available features in SAP S/4HANA launchpad to be also in SAP Build Work Zone launchpad. For example, below features in S/4HANA launchpad are not supported when using SAP Build Work Zone, standard edition:
 - My Home
 - Cards created from S/4HANA can not be directly consumed in SAP Build Work Zone launchpad
 - Personalizing the Navigation Bar to pin and reorder the spaces
 - Merging Launchpad Spaces or Pages

Detailed Limitations:

- Setup and Administration:
 - Mass exposure on SAP S/4HANA side is not recommended due to content size limitations in SAP Build Work Zone.
 - Notifications functionality will not work in 1809 release as it needs SAP_GWFND component 7.54 SPO6 and above. For more info refer Note: [3200288](#)
 - My Inbox integration is supported as of UI5 Patch version
 - SAPUI5 1.84.16 for SAP Fiori Front-End Server 2020
 - SAPUI5 1.71.40 for SAP Fiori Front-End Server 6.0 SPO4
- Usage and End User Limitations:
 - The merged Spaces or Pages in SAP S/4HANA launchpad are not merged in SAP Build Work Zone launchpad.
 - Content from different S/4HANA systems is not merged in SAP Build Work Zone: multiple groups, spaces, pages and apps with identical names might occur.

- Sorting orders of Spaces or Pages in SAP S/4HANA launchpad might not be reflected in SAP Build Work Zone launchpad.
- Built-in support for ticket creation and support related information is not supported when using exposure version 1.
- SAP CoPilot / CAI integration is not supported when using exposure version 1.
- Integrating Microsoft Teams (Share: Microsoft Teams) provided in the app is not supported when using exposure version 1.
- SAP Analytics Cloud based applications are not supported when using exposure version 1.
- **Contact Support** is not supported when using exposure version 1.
- Remote apps (Apps of type URL or URLT) which are integrated into SAP S/4HANA will be opened in a new browser tab/window in SAP S/4HANA shell or other product shell when using exposure version 1.

Note: Apps exposed via exposure version 2 are launched from SAP Build Work Zone in a standalone (new tab) mode within the shell of SAP S/4HANA launchpad. Therefore the full capabilities from S/4HANA launchpad (e.g. Built-in support, SAP CoPilot, user default parameters) are supported when using exposure version 2.
