

Engineering Base

blocked URL

Engineering Base provides an automatized and integrated engineering tool for instrumentation, electrical and process designing and documentation. It will allow the substitution of several other engineering tools and make it possible for engineers from diverse teams to work on the same environment, thus making their work faster and more efficient.

It is aimed at creating an universal work environment for engineering. It supposes engineering teams that work on different tasks using different tools develop distinct cultures, this creates extra work for communicating data between the teams, increasing costs and diminishing the quality of the process.

This applications allows for:

- Simultaneous file editing
- Integration between multiple engineering teams
- Customization of the workflow
- Open and extensible database
- Expansion and implementation of functionalities
