Purpose

The purpose of this document is to define the conversion approach to create Task List in S/4 HANA.

Legacy Plant Maintenance Task list is using a diverse range of formats across the different systems. There are instances where the same Work order is duplicated within and/or across sources, with informal words. This results in data inconsistency. As per SyWay design, EAM Maintenance Work order will be standardized.

The complete information of the key fields that hold the Task List information follows [DD-FUN- 050 Master Data Standard Task List.xlsx](#)

Conversion Scope

The scope of this document covers the approach for converting active Task List from Legacy Source Systems into S/4HANA following the Task List Master Data Design Standard.

The data from legacy system includes:

1. Task lists created on or after July 1, 2024
2. Task List Type:
 - A-General Maintenance Task List
 - E-Equipment Task List
 - T-Task List for Functional Location
3. Assigned to a relevant Functional Location if its type T(Functional Location)
4. Assigned to a relevant Equipment if its type E(Equipment)
5. Has at least 1 operation

The data from legacy system excludes:

1. Task lists not used over 3 years. (**Definition:** No Active Maintenance Items Assigned, No Open Notifications, No Open Work Orders)

Exceptions:

- a. Task lists used as part of a periodic plan (e.g., every X period) – to be manually reviewed by the Business
2. Task lists With Deletion Indicator or marked for deletion
3. Task list having Plant (PLKO-WERKS) not in scope

List of source systems and approximate number of records

Source	Scope	Source Approx No. of Records	Target System	Target Approx No. of Records
PF2, WP2	An initial extract will be provided to business to evaluate. Additional data/records may be required and these will be constructed via DCT. Enrichment of in-scope data may be required and will be added via transformation rules (business/technical).	61,000	S/4HANA	61,000

Additional Information

Multi-language Requirement

Task List header and operation description does not support multi Language. Any change to the description text via any logon language will overwrite the existing description. Description text can be view in any logon language.

Document Management

Long text and DIR are not covered in this document as they are defined as another data object.

Target Design

Task List Data strictly adheres to the Master Data Standard. The complete information of the key fields that hold the Class information follows the Master Data Standard document that is located here <include hyperlink>.

The technical design of the target for this conversion approach.

The high-level process is represented by the diagram below:

For sites that are not on SAP-PF2 and WP2 systems, collection will be done manually in the data collection template.

The high-level process for DCT is represented by the diagram below:

Data Privacy and Sensitivity

Extraction

Extract data from a source into . There are 2 possibilities:

1. The data exists. connects to the source and loads the data into . There are 3 methods:
 - a. Perform full data extraction from relevant tables in the source system(s).
 - b. Perform extraction through the application layer.
 - c. Only if ; cannot connect to the source, data is loaded to the repository from the provided source system extract/report.
2. The data does not exist (or cannot be converted from its current state). The data is manually collected by the business directly in . This is to be conducted using DCT (Data Collection Template) in

The agreed Relevancy criteria is applied to the extracted records to identify the records that are applicable for the Target loads

Task List DCT Rules

1. Task List Header

Field Name	Field Description	Rule
PLNTY	Task List Type	Key field. Select one of the following: A = General TL, E = Equipment, T = Functional Location
PLNNR	Key for Task List Group	Key field.
PLNAL	Group Counter	Key field. Must be sequential. Eg: 01, 02 etc
EQUNR	Equipment Number	Required only when PLNTY = E else leave blank
TPLNR	Functional Location	Required only when PLNTY = T else leave blank
DATUV	Valid-From Date	Default to current date
KTEXT	Description	Must not be blank. Restrict use of special characters. For list of restricted characters, refer to Appendix SR No 1 in : DD-FUN- 050 Master Data Standard_Functional Location
WERKS	Plant	Must reference active plant in config (T001W)
ARBID	Work Centre group with planning function	If PLNTY = A then select manually. If PLNTY = E or T then this default to Plant of Technical Object. Must not be blank. Must reference active Work Centre (CRHD)
VERWE	Task List Usage	Default to "004"

VAGRP	Planner Group	If PLNTY = A then select manually. If PLNTY = E or T then this default to Plant of Technical Object. Must not be blank. Must reference active Planner Group in config (T024A)
STATU	Overall Status	Must reference active Task List Status in config (T412)
ANLZU	System Condition	Must reference active Machine Operating Condition in config (T357M). Comments/Special handling notes: This field is integrated with PPDS scheduling. If user want to block production capacity, please select "0-not in operation"; Otherwise, user could select "1-in operation".
STRAT	Maintenance Strategy	Must reference active Maintenance Strategy in config (T351)
ISTRU	Assembly	Must not be blank. Must reference active Material (MARA) which are extended to Plant
DELKZ	Indicator: Delete completely in reorganization run	

2. Task List Operation

Field Name	Field Description	Rule
PLNTY	Task List Type	Key field. Select one of the following: A = General TL, E = Equipment, T = Functional Location
PLNNR	Key for Task List Group	Key field.
VORNR	Activity Number	Key field. Must be sequential. Eg: 0010, 0020 etc
PLNKN	Number of the Task List Node	Key field.
ARBID	Work Centre	Default to PLKO-ARBID. Must not be blank.
WERKS	Plant	Default to PLKO-WERKS Must reference active plant in config (T001W) Must not be blank.
STEUS	Control Key	Default to CRHD-STEUS Must reference active Control Key in config (T430) Must not be blank.
LTXA1	Operation Description	Must not be blank. Restrict use of special characters. For list of restricted characters, refer to Appendix SR No 1 in : DD-FUN- 050 Master Data Standard_Functional Location
ARBEI	Work Involved in the Activity	Must not be blank.
ARBEH	Unit for Work	Default to "H"
ANZZL	Number of Capacities Required	Must not be blank.
INDET	Key for calculation	Default to "1"
PRZNT	Work Percentage	Default to "100"
VERTL	Distribution function for capacity requirements	Must reference active Distribution Function in config (T498)
AUFKT	Execution Factor	

ANLZU	System Condition	<p>Must reference active Machine operating condition in config (T357M).</p> <p>Comments/Special handling notes: This field is integrated with PPDS scheduling. 3. Task List Component

Field Name	Field Description	Rule
PLNNR	Task List Key	Key field. Select one of the following: A = General TL, E = Equipment, T = Functional Location
ZUONR	No. for material comp. allocation to task list	Key field.
PLNKN	Number of the Task List Node	Key field.
IDNRK	Material Number	Must reference active Material (MARA) which are extended to Plant
MENGE	Component Quantity	
MEINS	Component Unit of Measure	Must reference active Units of Measurement in config (T006)
RGEKZ	Indicator: Backflush	
DISP	Relevancy to Materials Planning/Generation of Purchase Req.	
STLTY_W	BOM category	Must reference active Item Categories in config (T418)
WERK_STL	Plant	Must reference active plant in config (T001W)
EKGRP	Purchasing Group	If BOM category = "N", this field is required. Otherwise leave blank. Must reference active Purchasing Groups in config (T024)

EKORG	Purchasing Organization	If BOM category = "N", this field is required. Otherwise leave blank. Must reference active Purchasing Organizations in config (T024E)
LGORT	Issue Location for Production Order	If field BOM category = "N", default to MARC-LGPRO. Otherwise leave blank. Must reference active Storage Locations in config (T001L)
LIFNR	Account Number of Supplier	If BOM category = "N", this field is required. Otherwise leave blank. Must reference active Vendor (LFA1)

Extraction Dependencies

Item #	Step Description	Team Responsible
1	Ensure Syniti has the necessary connection and access to legacy servers	Data
2	Ensure that the necessary cleansing activities in legacy sources are complete	Data / Business
3	Ensure that create, change and deletion of master data is freeze in legacy Production system	Legacy IT

Transformation

The Target fields are mapped to the applicable Legacy field that will be its source, this is a 3-way activity involving the Business, Functional team and Data team. This identifies the transformation activity required to allow to make the data Target ready:

1. Perform value mapping and data transformation rules.
 - a. Legacy values are mapped to the to-be values (this could include a default value)
 - b. Values are transformed according to the rules defined in
2. Prepare target-ready data in the structure and format that is required for loading via prescribed Load Tool. This step also produces the load data ready for business to perform Pre-load Data Validation

Pre-Load Validation

Project Team

Completeness

Task	Action
Verify Record Count	SyWay A2D Data Team to verify that the total number of relevant records from legacy systems and DCTs (if any) is equal to the total number of records in the Preload and Load Sheets.
Verify Data Integrity	SyWay A2D Data Team to verify that the total number of Operations per Work Oder header extracted from legacy systems and DCTs (if any) should be equal to the total number of operations identified in the Preload and Load Sheets

Accuracy

Task	Action
Conversion Accuracy	SyWay A2D Data Team to verify that all fields below meet pass the checks: <ol style="list-style-type: none"> 1. Mandatory Fields 2. Field and Value Mapping Correctness 3. Null Checks 4. Text Length Checks
Review Error Reports	Review and correct the errors. Achieve a zero-error record count as much as possible. Raise defects for data remediated and requiring a correction in the source data.

Business

Completeness

Task	Action
Verify Record Count	Business Data Owner/s to verify that the total number of relevant records from legacy systems and DCTs (if any) is equal to the total number of records in the Preload and Load Sheets.

Accuracy

Task	Action
Conversion Accuracy	Business Data Owner/s to verify that all fields below meet pass the checks: <ol style="list-style-type: none"> 1. Mandatory Fields 2. Field and Value Mapping Correctness 3. Null Checks 4. Text Length Checks

Load

The load process includes:

1. Execute the automated data load into target system using load tool or product the load file if the load must be done manually
2. Once the data is loaded to the target system, it will be extracted and prepared for Post Load Data Validation

Post-Load Validation

Project Team

Completeness

Task	Action
Verify Count	SyWay A2D Data Team to verify the record count created in target S/4 HANA by accessing post load reports in dspMigrate or standard reports from S/4 HANA.
Verify Logs	Check if there is data that failed to load and perform the necessary actions (e.g. register as post load issue or attempt to load the record again, etc.).

Accuracy

Task	Action
Conversion Accuracy	SyWay A2D Data Team to verify that the Work order data in target S/4 HANA were loaded correctly via dspMigrate post load reports or standard reports from S/4 HANA.

Business

Completeness

Task	Action
Verify Count	Download Post Load Reports from dspMigrate and verify that the record count loaded in the target S/4 HANA is the same count as of the endorsed load file.

Accuracy

Task	Action
Conversion Accuracy	Verify that the EAM Work order data in target S/4 HANA were loaded correctly via dspMigrate post load reports or standard reports from S/4 HANA.

Key Assumptions

- Master Data Standard is up to date as on the date of documenting this conversion approach and data load.
- Task List is in scope based on data design and any exception requested by business.
- All data cleansing and preparation has been completed.
