Description Responsibility Area & Process

Assessment cycles

An **assessment cycle** is used in SAP to assign all primary cost elements and secondary cost elements from a sending cost center to the receiver cost center. When you want to transfer costs from one cost center to another through an assessment cycle, sap use a **secondary cost element** and accumulates all the primary cost and secondary cost and send it to the receiving cost center.

Definition

An **assessment cycle** is used in SAP to assign all primary cost elements and secondary cost elements from a sending cost center to the receiver cost center. When you want to transfer costs from one cost center to another through an assessment cycle, sap use a **secondary cost element** and accumulates all the primary cost and secondary cost and send it to the receiving cost center.

PF1

In PF1, assessment cycles are used to:

- Allocate common production & utilities cost centers to Workshops cost centers (EE32xxxxxx or EE193xxxxx)

The codification of the **secondary cost element** to be used is: 91xxxx
xxxxxx

WP1

In WP1, assessment cycles are used to:

- Allocate common production cost centers (PPPP-2xxx) to Workshops cost centers (PPPP-1xxx)

The codification of the **secondary cost element** to be used is: 99xxxx
xxxx

COPA Assessment cycle

COPA Assessment cycle assesses costs from a Cost Center to COPA Value Fields.

In **PF2**, the P&L is built in COPA, cost centers are assessed to a value field in COPA with a secondary cost element 98xxxxxxx

In **WP2**, the P&L is built in COPA, cost centers are assessed to a value field in COPA with a secondary cost element 994299xx

Distribution cycle

i A **distribution cycle** is used in SAP to transfer primary costs from a sender cost center to receiving controlling objects. The original cost element remains the same.

In **PF1**, distribution cycles are used for IAS 19

When you create a cycle to distribute corporate IAS19 costs in PF1, you must follow the following steps:

STEP 1

Create a distribution cycle with KSV1 - Create Actual Distribution Cycle

1. Cycle = CCCCDEV
2. Start Date = 01.01.20YY to 31.12.20YY
3. Text = Distribution (IAS19)

The screenshot shows the SAP distribution cycle creation screen. The Controlling Area is **CHEF ERP SOLVAY**. The Cycle is **0001DV** (marked with 1). The Start Date is **01.01.2024** and the To date is **31.12.2024** (marked with 2). The Text is **Distribution (IAS19/Insurance)** (marked with 3). The Indicators section has **Iterative** checked. The Field Groups section has **Object Currency** checked.

STEP 2

Only one segment needs to be created

1. Segment name = **EE800IAS19**
2. Segment description = **IAS 19 BFC Dotation**
3. Sender values =
 - Sender rule: Posted amounts
 - Share in %: 100
 - Act. vals

The screenshot shows the SAP distribution cycle creation screen for the segment. The Controlling Area is **CHEF ERP SOLVAY**. The Cycle is **0001DV**. The Segment Name is **SM800IAS19** (marked with 1). The Segment Description is **IAS19 BFC Dotation** (marked with 2). The Segment Header is selected. The Sender values section shows the Sender rule as **Posted amounts** (marked with 3), Share in % as **100,00 %**, and Act. vals selected. The Receiver tracing factor section shows the Receiver rule as **Variable portions**, Var.portion type as **Actual costs** (marked with 4), and Scale Neg. Tracing Factors as **No scaling**.

4. Receiver tracing factor

- Receiver rule: Variable portions
- Var.portion type: Actual costs
- Scale Neg. Tracing Factors: No scaling

5. Sender cost center = EE 800IAS19

6. Sender cost elements group = ZS O-P20010

7. Receiver cost centers group = E_CCCC (= all cost centers of the company)
