

Shipment costs vs invoice

BW_QRY_MVSDTR01_0011

Query for analyses at shipment level that are not relevant at delivery item level.

Comparison between accrual and invoiced value.

Accrual costs vs invoice analysis (BW_QRY_MVSDTR01_0011)

Key Figures

- **Net value ⁽¹⁾**
Stored at shipment stage x cost item x delivery item level then summed
- **Invoiced value**
Stored at shipment x PO level then summed
- **Net/Gross weight ⁽²⁾**
Stored at delivery item x shipment stage level then summed on delivery item x shipment but not on shipment stages.
- **Distance in Km**
Stored at shipment stage x delivery item level and summed on stages and shipments but not on delivery items nor deliveries.
- **Detailed cost condition value ⁽¹⁾**
Stored at delivery item x shipment stage x condition type then summed
- **Number of containers**
Stored at shipment level
- **Number of Hus**
Stored at shipment x delivery level but presented only at shipment level then summed.

(1) in both document currency and prompt currency

(2) in both document unit and prompt unit

Analysis Axis

- **Shipment** (plant, GBU, haulier, geography),
- **Nature of costs**, ...

On Purpose Restrictions

No analysis axis based on delivery / delivery item as we are not able to split some key figures proposed in that query among deliveries and items in one shipment.
