

# ECI Datacatalog

## ECI Datacatalog

The Data Catalog is a tool developed by Corporate ECI that gathers data from numerous sources structures them in a single format and puts the organized and classified data at your disposal. The gathering is made twice a month (the 15th and 30th), to ensure having always the latest data available.

Its three main functionalities are:

- Search and access several databases on one single and structured platform.
- Explore the data and select the desired indicators from one or several databases. Save your selection for future use
- Export your selection to excel, drive, or send it directly to our Business Intelligence Tool (MicroStrategy).
