

Manage Locations

Overview

On any Tridion site (Solvay ONE, Internet, ...), you can display a specific location map.

This guide doesn't cover the creation of a location map page which needs an administrator operation. If you need it, please ask it through a [Web support contact](#).

See a [Live example on the Solvay ONE Coatis Space](#).

Step-by-steps

- [Create / Update a Location](#) — Create or update a location from the location finder. If you just need to remove a location, without replacing it, you should use the Delete a Location step-by-step.
- [Delete a Location](#) — Remove a location from a locations map. If you need to update a location with a new address for example, you better should use the Create / Update a Location step-by-step to update the existing one, replacing it with an other address.
