

Confluence: Modifying Space address & Key Space

If user requests to change the web address & name of key for an existing Confluence space, then we should perform the below actions,

[blocked URL](#)

Reference ticket: <https://sbs-support.solvay.com/helpdesk/tickets/2505206>

1. Modifying web address:

Considering an example,

Existing link :

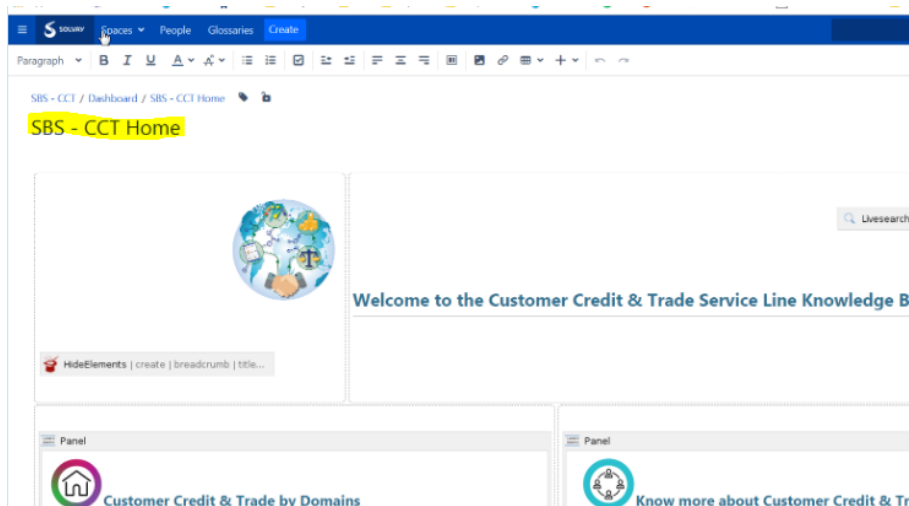

<https://wiki.solvay.com/display/SBSOTC/SBS++OtC+Home>

Required link:

<https://wiki.solvay.com/display/SBSOTC/SBS++CCT+home>

We just need to edit the name of the page.

For example refer the below screenshot:

2. Modifying key name:

We should inform the user that for right now we cannot change the space key once it is done, what we can do is copy all the space to a new space giving a new space key.

Currently, **neither Confluence server nor Confluence cloud has a supported method of copying a space or changing space keys.** The information on this page is provided for informational purposes only, and **will not be directly supported by Atlassian.** Should you wish to pursue possible workarounds in light of this limitation. This information is not actively maintained and **should be thoroughly tested before applying to any production environments.**

- Feature request to clone an entire space - this will enable duplication of every page, news item and comment plus space themes and colour schemes.
- Feature request to copy a page hierarchy between existing spaces (available in Confluence Server from 6.0).
- Feature request to change a space key of an existing Confluence space
