

# How to identify if a page is Internet/Intranet/Webfactory

To identify if a page is Internet, Intranet or Webfactory we have to check for the link provided.

1. If the link contains the word "one" then the page is Intranet (Solvay One).

For example: <https://one.solvay.com/en/index.html>

<https://one.solvay.com/en/corporate-news-center/Solvay-wishes-Happy-Holidays-and-an-excellent-2019.html>

2. If the link starts like [www.solvay....](http://www.solvay.com) then the page is Internet.

For example: [www.solvay.cz](http://www.solvay.cz)

[www.solvayindia.in](http://www.solvayindia.in)

3. If the link contains some other words similar to the below examples, then it is Webfactory.

For example: [www.technyl.com](http://www.technyl.com)

[www.vinythai.co.th](http://www.vinythai.co.th)

We can refer the following article for Internet & Webfactory sites: <https://wiki.solvay.com/display/ISAPPSUP/Tridion+sites+access+links>
