

# Post survey to Social Media

The Social Media tab in the Distributions module makes it easy to post your survey to social media websites. Qualtrics currently supports the following sites:

- Twitter
- Facebook
- Reddit
- LinkedIn
- Google+
- Pinterest

When sharing a survey through social media, the social media site the respondent comes from will be recorded in each response as [Embedded Data](#). Simply add an Embedded Data field to your survey and name it Q\_SocialSource. You can access and report on this data the same way you access and report on all other Embedded Data fields.

Click [HERE](#) to know more about posting your survey.
