SOLVAY BUSINESS SERVICES | Oct 28, 2015

Solvay Business Services

SAP Single Sign On (SSO) project launched in quarter 4 of 2015!

Today each SAP solution-based system provides its own user and password repository. Therefore, users of SAP applications must have a password, specific to each instance of the SAP solution in use, and enter them in order to access the application. Those passwords are in addition to those they might already have for accessing other IT systems in the environment

Requiring users to have multiple passwords has significant drawbacks:

- Productivity: Users have to remember multiple passwords to access every application. A forgotten password also means a long wait for a

The screenshot shows a web article page with a blue sidebar on the left containing navigation icons: a magnifying glass, a hamburger menu, a person icon, a document icon, and a star icon. The main content area has a header with 'SOLVAY BUSINESS SERVICES | Oct 28, 2015' and a sub-header 'Solvay Business Services'. The main title is 'SAP Single Sign On (SSO) project launched in quarter 4 of 2015!' followed by an image of colorful 3D figures sitting around a table with puzzle pieces. Below the image is a paragraph of text and a sub-heading 'Requiring users to have multiple passwords has significant drawbacks:'. In the top right corner, there is a toolbar with three icons: a star (highlighted with a red box), a share icon, and an email icon. The text 'Click to remove' is positioned above the star icon.
