

Macro - Include

You can use the Include Page macro to display the contents of one Confluence page or blog post in another page or blog post.

Include Page

Include the full content of one page within another page

This is the include macro

(include page [Confluence - FAQ](#))

Please kindly submit a request for access. You can refer to this [article](#).

Please refer to this [article](#).

First, you would have to check if you are using Solvay Network. If not, please kindly connect to VPN. Otherwise, the page you tried to access may have a page restriction. Please kindly submit a request for access. You can refer to this [article](#).

External user will need to have an account with Syensqo.

- [Can my space have custom look and feel](#)
- [How to Edit Wiki Template page](#)
- [I am not able to connect to Jira from Confluence](#)
- [PO2 Spin-off : CONFLUENCE GOLIVE & Hypercare](#)
- [What is a space key and how can I find it ?](#)
- [What will happen to my space for PO2](#)

Parameters

Page to Include: Enter the name of the Confluence page or blog post that you want to include in the current page. Start typing a page title, and Confluence will suggest matching pages from the current space and other spaces.

Insert 'Include Page' Macro

Include the full content of one page within another page [Documentation](#)

Page to Include *

To specify a page in a different space, use SPACEKEY:Page Title.
