

Links

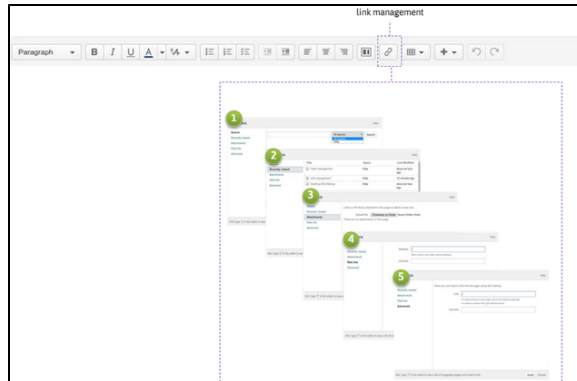

You can create links to pages, anchors, attachments, external websites. Links can be text or images.

Links to pages within Confluence are relative, which means that you can move pages and rename pages without breaking links.

Insert a text link

To insert a link on a page:

1. Select some text or position your cursor where you want to insert the link
2. Choose **Link** on the toolbar
3. Select a page or attachment, or enter an external URL
4. **Enter** or **modify** the link text (this is the text that will appear on the page. If this field is left blank, the page name or URL will be used as the link text.)
5. Choose **Insert**

You can also paste a URL directly onto your page. Confluence will automatically create the link, and if the URL is for a page in the current site, the page name will be set as the link text.

Insert an image link

[blocked URL](#)

1. Select an image on your page
2. Choose **Link** on the Image Properties toolbar
3. Select a page, an attachment, or enter an external URL
4. Choose **Insert**

Modify a link

[blocked URL](#)

1. Select the link text or image
2. Choose **Edit** from the link properties toolbar
3. Modify the link and choose **Save**

Remove a link

1. Select the link text or image
2. Choose **Unlink** from the properties toolbar
