

# BASF launches Orvego™ fungicide for ornamental growers

BASF announced the launch of a targeted plant disease control solution. Orvego™ is a unique combination of two active ingredients that target the most infectious stages of plant diseases.

**Orvego™** is a new fungicide that provides growers with a new tool to combat all major downy mildews and other plant diseases within seconds of infection, providing growers with a new

**fungicide** to help manage resistance. **Orvego** is a new resistance-management tool that provides growers with a new

ornamental growers control solution. **Orvego** contains a new active ingredient that targets Phytophthora species during the most infectious stages of the disease.
