

# Recent BASF research highlights Plant Health benefits of fungicides containing F500® fungicide

PUBLICATION DATE Nov-12

BASF today announced new research showcasing the Plant Health benefits of fungicides containing F500® fungicide and how they can help growers increase yield and profit potential. The research, which was conducted by BASF in the field and in greenhouse settings, shows that BASF fungicides increase net photosynthesis in corn and soybean plants, which increases energy production, leading to increased yield potential.
