

China's Shandong Wanda starts up new BD unit in end-'13 /early '14

DATE : 2013-10-14

China's Shandong Wanda Chemical is planning to start up its 150,000 tonne/year butadiene (BD) plant at Dongying in end-2013 or early next year, a company source said on Monday. The company has been commissioning the plant in Shandong province since September, the source said.

The plant uses butylene as feedstock to produce BD through dehydrogenation, the source said.
