

# ACN plant to be operated by Lukoil at lower rates

DATE : 2013-07-24

Lukoil is in plans to operate an Acrylonitrile (ACN) plant at curtailed capacity levels.

A Polymerupdate source in Russia informed that over the next one month, the plant is expected to run at around 50% of production capacity. The intended lower rates are a result of unplanned repairs to be undertaken at the plant's reactor.

Located in Saratov, Russia, the plant has a production capacity of 140,000 mt/year.
