

# ACN plant restarted by Tongsoh

DATE : 2014-07-23

Tongsoh Petrochemical has restarted its No.3 acrylonitrile (ACN) plant following an unexpected shutdown.

A Polymerupdate source in South Korea informed that the plant restarted early last week. It was shut a week prior to its restart on account of a power outage caused by a thunderstorm.

Located at Ulsan in South Korea, the plant has a production capacity of 245,000 mt/year.
