

Nippon Shokubai to restart Indonesian AA, acrylate esters units

DATE : 2014-06-04

Nippon Shokubai Indonesia plans to restart its crude acrylic acid (AA) and acrylate esters unit at Cilegon in West Java in end-June, a company source said on Wednesday.

The company operates a 60,000 tonne/year crude AA plant and a 100,000 tonne/year acrylate esters unit at the site. Both units were shut earlier in the previous week for scheduled maintenance.

The duration of the shutdown is expected to last for around a month, the source said.
