

Solvay doubles its worldwide production capacity of MeHQ

DATE : 2013-12-19

Solvay Aroma Performance, the world leader of MeHQ (Methyl Hydroquinone or also referred to as PMP for para-methoxyphenol), a strategic molecule for monomer and agro markets, has decided to double its worldwide production capacity to continuously support the growth of its customers and the related markets in the next few years.

The global demand for MeHQ (PMP) is driven by high and sustained growth of markets such as specialty polymers (superabsorbents), paint, construction, automotive, consumer goods and agrochemicals.

As the worldwide manufacturer of MeHQ with leading positions in Europe, Americas and Asia, Aroma Performance is determined to continue investing in this strategic product to support its customers growth in monomers and agro products , says Remi Rothea, worldwide Performance Solutions Business Director.

This very significant capacity increase illustrates Solvay s commitment to serve and develop the MeHQ markets, especially in the fast growing Asian countries.

A recognized global player, Solvay is a trusted partner with its comprehensive range of stabilizers for monomers that provides high-quality technical support and service to its customers, particularly with its international expertise laboratories in Asia and Europe.
