

VAM plant to be started by Ningxia Younglight

DATE : 2013-11-29

Ningxia Younglight Energy Chemical is likely to start commercial operations at a vinyl acetate monomer (VAM) plant.

A Polymerupdate source in China informed that commercial production at the plant is expected to start in March 2014.

To be located in Yinchuan, Ningxia province, China, the plant will have a production capacity of 450,000 mt/year.
