

# Syngenta Receives EU Approval for Solatenol

Syngenta has announced that its succinate dehydrogenase inhibitor (SDHI) fungicide Solatenol (benzovindiflupyr) has received EU approval. Solatenol is reportedly effective against a number of diseases in cereal production, including *Septoria* spp. and rusts. The product will initially be made available for sale in France during the 2016 season, with Syngenta targeting a peak sales potential of \$200 m. across Europe.

Solatenol has recently been approved in the USA (see *AgreWorld* 1<sup>st</sup> September 2015) and Canada (see *AgreWorld* 2<sup>nd</sup> September 2015), and is anticipated for commercial launch in those regions this year.
