

Russia's SIBUR to undergo maintenance at Dzerzhinsk acrylates site

DATE : 2015-03-26

Russia-based major SIBUR will start planned maintenance at its acrylic acid (AA) and acrylate esters facility in Dzerzhinsk, Russia, in April, a source from the company confirmed on Friday.

The turnaround is scheduled to begin on 1 April and end in mid-April, the source added.

SIBUR has the capacity to produce 36,000 tonnes/year of butyl acrylate (butyl-A) at the facility, which is based in the eastern industrial area of Dzerzhinsk, Nizhny Novgorod in Russia.
