

News: biofuels in brief: Global Bioenergies starts an industrial pilot plant for methacrylic acid in Pomacle-Bazancourt

DATE : 2015-05-27

Global Bioenergies has achieved the initial milestone of the BioMA+ project to develop a renewable value chain for methacrylic acid. The firm inaugurated an industrial pilot facility for methacrylic acid, used in producing acrylic paints, at the Pomacle-Bazancourt agro-industrial site in France. The plant uses bio-derived isobutene generated as a result of the initial phase of the project.
