

SM plant in Germany operated by BASF at lower rates

DATE : 2015-02-12

BASF is operating its styrene monomer (SM) plant at lower capacity levels.

A Polymerupdate source in Germany informed that though the exact quantum of reduction could not be ascertained, it is the result of a technical issue at the plant following the restart of the plant after a turnaround in early 2015.

Located at Ludwigshafen in Germany, the plant has a production capacity of 550,000 mt/year.
