

Momentive will soon start turnaround at Czech acrylic acid plant

DATE : 2014-10-02

The planned turnaround at one of Momentive Specialty Chemicals's two lines at its plant in Sokolov, Czech Republic, is imminent, a source from the company confirmed late on Wednesday.

The maintenance will last three to four weeks, the source said, adding that there should be no impact on the market as its inventory is under control.

The plant is expected to run at approximately 50 % of capacity during the turnaround. Momentive has the capacity to produce around 55,000 tonnes/year of acrylic acid.
