

# FD 2528092 - Handling unit still attached to one delivery

## Issue Description:

User has created an outbound delivery document and uses tcode ZWPUT031 (stock transfer/Interactive list for HUM) to assign Handling Unit(HU) to this delivery. However while doing it system proposes an error that Delivery/Item no handling unit found

## Issue Analysis:

Upon further analysis we have found that for material 119988 and batch U8K14APB01 there are some HUs available in system and however those HUs were assigned to some other outbound delivery initially and later that assignment was decoupled however the status of those HUs assignment still shows reserved to old deliveries so when user tries to process this material through ZWPUT031 system is unable to find HUs.

Kindly refer the below screenshots

Table VEKP:

Int. HU no	Item I	Delivery	Item DocCa	LwLvl.HU	Quantity	Internal field/ Do not use / LGMING	UoM	UoM	Amount	S	Material	Batch

Detailed Data for Handling Unit 1024568330

**Resolution:**

In this case the HUs was already decoupled from incorrect delivery document but only the status RESER was not changed accordingly. So user was not able to assign these HUs to current delivery document.

Therefore the user has to use either tcode HUMO or HU02 to remove the status RESER from these handling unit and save it. Then they can assign these HUs to correct delivery document through tcode ZWPUT031

**Note:**

There are some cases where HUs are still attached to old delivery/incorrect delivery document .To decouple and modify each HU kindly run the program ZWIMX01300 in SE38 and indicate each HU number to modify and flag the box « DB\_UPD' to update the HU. Repeat the operation for each HU (kindly refer the attached document for reference)

Document on tcode ZWPUT031 was also attached for your reference.
