

AppSheet - How to migrate a user between domains?

AppSheet - How to migrate a user between domains?

Go to AppSheet, log in and go to "My Apps". Then click on

[+ New mobile app](#)

and follow the AppSheet steps.

General Migration Strategy

This example will take the recent process that was done for Pax project.

Picking up a user that has a [X@solway.com](#) and migrate into a new one to [X@alsachimie.solway.com](#).

Before migration each user [X@solway.com](#) should do the following:

1. Have user [X@solway.com](#) add [X@alsachimie.solway.com](#) as a co-editor for all owned apps. You can do this anytime, and the account [X@alsachimie.solway.com](#) doesn't need to exist yet (it's just an invitation).

The screenshot shows the AppSheet interface for managing users. The 'Users' section is active, displaying a 'SHARE YOUR APP WITH' form. The 'User emails' field contains 'digital.chalampe@alsachimie.solway.com'. The 'Add as co-authors?' toggle is turned 'ON' and is highlighted with a red box. A blue button 'Add users + send invite' is visible at the bottom of the form. A warning message indicates that prototype apps should not exceed 10 users in the last 30 days. The bottom of the screen shows an 'APPROVED USERS WHITELIST (1 INVITED AND 1 RESPONDED)' section.

1. (optional) Add [digital.chalampe@alsachimie.solway.com](#) or any other account you like as a co-editor.
2. Add any [@alsachimie.solway.com](#) needed to the white list as users. Again you can add those email addresses before those accounts have been created or transferred.

APPROVED USERS WHITELIST (1 INVITED AND 1 RESPONDED)

After Migration:

1. Have user X@alsachimie.solvay.com login and transfer any apps they own from X@solvay.com to X@alsachimie.solvay.com. Since X@alsachimie.solvay.com will already be a co-editor on those apps they will be able to transfer them to themselves.
