

What are the different clients (ways to run) for Qlikview ?

Currently QlikView has 4 different "clients" or ways to be accessed :

- **Internet Explorer Plugin** : by far the best client, it requires a plug-in to be installed for Internet Explorer (IE). Only works with the standard version of IE, not with the 64-bits version.
- **Full Browser Version** : uses Java to display the dashboard. Slower and less possibilities than the plug-in client.
- **Small Device Version**: intended for accessing the dashboards via phone/tablets devices (not used currently in Solvay).
- **Download** : downloads the dashboard as a "qvw" file. Requires a Qlikview client to be installed on the PC. Currently only used for IT.
