

QlikView - Filtering

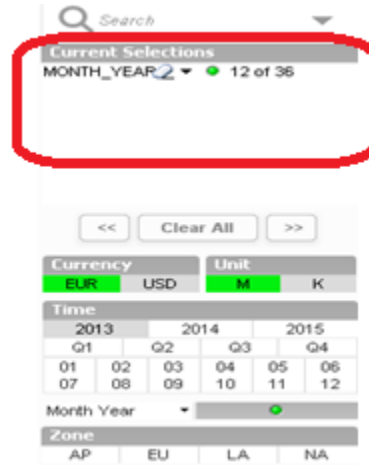

Making a selection/filter

To make selection, click on the values you wish to select.

- The selected data will turn **green**. Values compatible with the selection are **white** and unrelated values are **grey**.

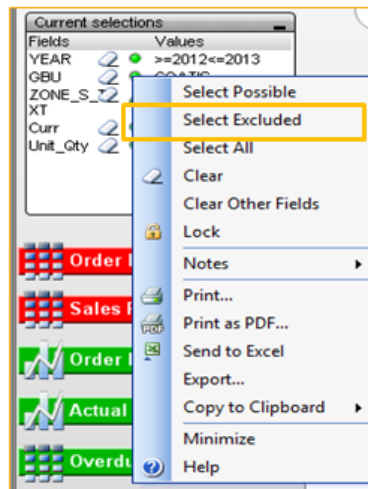

- To select more than one value, hold the CTRL key while selecting the values.
- Each selection also feeds the "Current Selections"

Excluding a value

To exclude one value, first filter on it, then right click on that value in the current selection value and choose "Select Excluded" :

Clearing a selection/filter

Clearing all the selections

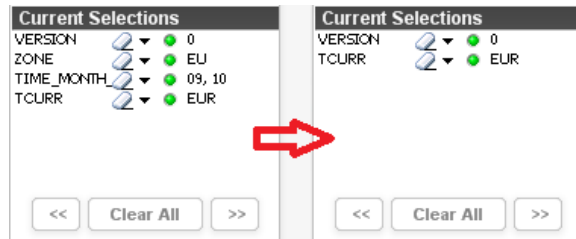

To clear all selections, click the "Clear" button from the tool bar.

You can also use the "Clear All" button of the Current Selections Screen

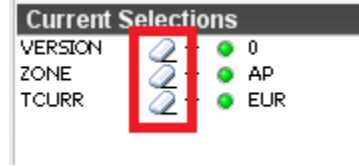

Uncleared Selections

Note that it's possible some selections cannot be cleared : that's for the cases where the dashboard data would make no sense without a selection (Ex : If multiple currencies are available you need to select one)

Clearing a single selection

- You can use the eraser button in the Current Selections window :
- You can click on the selected value in the list (this will unselect it).
- You can click on the Clear Selection icon in the list (Not available on all dashboards)

Clearing the previous selection

You can also use the Back button in the toolbar to revert the last selection done
