

How to Add a Frame

Frames are essential to structure your content on the board and manage the big picture. They are also helpful for creating presentations or exporting a board.

There are 3 simple ways to **add a frame to the board**:

1. Select "Frame" on the toolbar or press F on your keyboard and click anywhere on the board.
2. Drag and drop a frames widget right on the board.
3. Click anywhere on the board and drag your cursor holding the left mouse button.

And if you need to **add an existing frame from another board** - just copy and paste it like any other content! — Ctrl+C/Ctrl+V will work as well.

Frames act like pages that group objects together.

All the content inside the frame moves and is copied together with the frame.

Accidentally deleted a frame? Have no worries, all the content will stay on the board.
