

Getting started with Miro

Miro allows you to work on projects, brainstorm, do UX and product design, create agile boards, hold retrospectives or do other collaborative exercises.

You can also take the Miro course [here](#)

How to?

To kick things off, [create a new board](#) and [add a frame](#) to it.

Each board is endless, and frames act like pages.

There is no need to start from scratch just [pick a pre-made template](#) from Miro's growing library — you can skip it if you wish, you will always be able to use templates later.

Changes are highlighted on the boards to help keep you on track with updates.

What can you do?

- You can easily [navigate the board using Frames](#), and [upload different types of content](#).
- Use [sticky notes](#) to write down ideas and tasks like on a real whiteboard.
- With [shapes](#) and [connection Lines](#), it's easy to create flowcharts anywhere on the board.
- [Create mind maps](#)
- [Invite co-workers and remote colleagues](#) to hold real-time brainstorming and ideation sessions, or work at your own pace with people from different time zones.
- You can also [participate in discussions](#) and [get notified](#) of important comments and [mentions](#) in the email, browser.
