

How to decide when MFT should be used

How to decide when MFT should be used

When to use MFT

MFT should be used when the exchange of data needs to be done internally with in Solvay network **OR** when data crosses the Solvay Firewall.

- When outbound data is being sent to a partner/customer/entity/internal application which resides inside or outside of the Solvay network, then Managed Transfer Transfer (MFT) should be used.
- When inbound data is being received from a partner/customer/entity/internal application which resides inside or outside of the Solvay network, then Managed Transfer Transfer (MFT) should be used.
