

# How to write Google App Script

## How to write Google App Script

Google App Script is written with very close references to JavaScript.

There are many materials online articles or Youtube video to refer from.

### Important Advices!

No matter how good is your script, it is **never complete if there is no good process** to cover about the following:

- Is there proper documentation on your scripts?
- Who will be maintaining it after you are promoted?
- What will you do manually if Google is down?
