## Purpose

The purpose of this document is to define the conversion approach for assigning the Business Partner role BUP001 (Contact) in SAP S/4HANA. In S/4HANA, Business Partner roles define the context in which a BP can be used. The BUP001 role is essential for identifying individuals as contact persons within customer and vendor relationships.

## Conversion Scope

### Customer Contact Person

The scope of this document covers the approach for converting active Contact Person from Legacy Source Systems into S/4HANA Business Partner (BP) Relationship Master Data Design Standard.

The data from legacy system includes:

1. An individual is created with minimal information such as Name, Last Name, email address and assigned as a contact person for a customer.
2. An individual is assigned in the customer master, partner functions in scope under partner type (TPAR-NPART) "AP - Contact Person". For Example, partner function CP - Contact Person (PF2), Q1 - QM Cert. Recipient 1 (PF2), Z6 - Z6 SDS Receiver - Sales (WP2), ZY - Z6 SDS Receiver - Sales (WP2) and etc.
3. The contact person created for the Customers object 3007 in scope.

The data from legacy system excludes:

1. Contacts marked as deleted or obsolete in the legacy system.
2. Contacts not linked to any customers within scope.

List of source systems and approximate number of records

Source	Scope	Source Approx No. of Records	Target System	Target Approx No. of Records
WP2	Customer Contact Person	150,000	S4 Hana ROW	150,000
PF2	Customer Contact Person	150,000	S4 Hana ROW	150,000
WP2	Customer Contact Person	150,000	S4 Hana China	150,000
PF2	Customer Contact Person	150,000	S4 Hana China	150,000
WP2	Customer Contact Person	150,000	S4 Hana CUI	150,000
PF2	Customer Contact Person	150,000	S4 Hana CUI	150,000

### Vendor Contact Person

The data from legacy system includes:

1. Vendors found in KNVK-LIFNR which pass Relevancy Rules under Data Object (3007-Business Partners - General (Role 000000)) will be assigned with Contacts available from Legacy.
2. BP contacts which are marked as approved in the DCT which are also under these Data Objects (3007-Business Partners - General (Role 000000) and CNV-3027 Business Partners - Plants / Intercompany Suppliers)).

The data from legacy system excludes:

1. ~~Contacts marked as deleted or obsolete in the legacy system.~~
2. BP contacts that are marked as not approved in the DCT table,

List of source systems and approximate number of records

Source	Scope	Source Approx No. of Records	Target System	Target Approx No. of Records
WP2	<del>Vendor Contact Person</del>	50,000	<del>S4 Hana ROW</del>	50,000
PF2	<del>Vendor Contact Person</del>	50,000	<del>S4 Hana ROW</del>	50,000
WP2	<del>Vendor Contact Person</del>	50,000	<del>S4 Hana China</del>	50,000
PF2	<del>Vendor Contact Person</del>	50,000	<del>S4 Hana China</del>	50,000
DCT	Data will be provided by business manually or via excel upload to DCT	TBD	S4 Hana (CUI ROW China)	<100k

## Additional Information

### Multi-language Requirement

The customer and vendor contact person may contain international address. Therefore, the conversion will also need to support the multi-language address. Below languages (International versions) are supported.

C	Simplified Chinese
R	Cyrillic
K	Kanji (Japanese)
A	Arabic
3	Korean
T	Thai
H	Hangul

### Document Management

N/A

### Legal Requirement

CMMC 2.0 is a mandatory DoD cybersecurity certification for contractors handling Controlled Unclassified Information (CUI) and Federal Contract Information (FCI). CUI includes sensitive technical data (e.g., design specs, system info) related to U.S. military and space applications. The Composites Business handles CUI and is therefore within CMMC scope. Without certification, the business risks disqualification from existing and future DoD programs. It is mandatory to implement CMMC-compliant systems and processes to for all the organizations that are dealing with CUI.

Therefore, there will be one SAP instance specifically for CUI related entities. The migration for CUI related entities will be covered by US based data consultant using separate tools.

### Special Requirements

#### Customer Contact Person

##### A. Different SAP Instance Migration Approach

Due to compliance requirement, there will be one SAP instance for Rest of the World (ROW), one for China and one for CUI. For BP general data, the same data will be created in all 3 SAP instances.

## Target Design

MDS Link:

The technical design of the target for this conversion approach.

Table	Field	Data Element	Field Description	Data Type	Length	Requirement

## Data Cleansing (Customer)

ID	Criticality	Error Message/Report Description	Rule	Output	Source System
3011-001		Corresponding customer master is not in scope	For contact person which customer is not in migration scope.		PF2/WP2
3011-002		Telephone number contains non-numeric characters	If any non-numeric characters maintained in the telephone number (ADR2-TEL_NUMBER, ADR2-TEL_EXTENS).		PF2/WP2
3011-003		Fax number contains non-numeric characters	If any non-numeric characters maintained in the fax number (ADR3-FAX_NUMBER, ADR3-TEL_EXTENS).		PF2/WP2
3011-004		Invalid email address	If the email address is not in the pattern of XXXX@XXXXX.XX (ADR6-SMTP_ADDR) No space is allowed		PF2/WP2
3011-005		Missing last name	If the last name is blank (KNVK-NAME1)		PF2/WP2
3011-006		Missing communication language	If the communication language (KNVK-PARLA) is blank.		PF2/WP2
3011-007		Missing country	If the country is blank (ADRC-COUNTRY).		PF2/WP2
3011-008		Missing email address	If the email address (ADR6-SMTP_ADDR) is blank		PF2/WP2
3011-009		Telephone Extension maintained without Telephone number	If the Telephone number (ADR2-TEL_NUMBER) is blank and Telephone Extension (ADR2-TEL_EXTENS) is not blank.		PF2/WP2
3011-010		Fax Extension maintained without Fax number	If the Fax number (ADR3-FAX_NUMBER) is blank and Fax Extension (ADR3-FAX_EXTENS) is not blank.		PF2/WP2

## Data Cleansing (Vendor)

ID	Criticality	Error Message/Report Description	Rule	Output	Source System
----	-------------	----------------------------------	------	--------	---------------

<del>3011-001</del>		<del>Corresponding vendor master is not in scope</del>	<del>For contact person which vendors not in migration scope.</del>		<del>PF2/WP2</del>
3011-002		Telephone number contains non-numeric characters	If any non-numeric characters maintained in the telephone number (ADR2-TEL_NUMBER, ADR2-TEL_EXTENS).		PF2/WP2
3011-003		Fax number contains non-numeric characters	If any non-numeric characters maintained in the fax number (ADR3-FAX_NUMBER, ADR3-TEL_EXTENS).		PF2/WP2
3011-004		Invalid email address	If the email address is not in the pattern of XXXX@XXXX.XX (ADR6-SMTP_ADDR) and email does contain spaces.		PF2/WP2
3011-005		Missing last name	If the last name is blank (KNVK-NAME1)		PF2/WP2
3011-006		Missing communication language	If the communication language (KNVK-PARLA) is blank.		PF2/WP2
3011-007		Missing country	If the country is blank (ADRC-COUNTRY).		PF2/WP2
3011-008		Missing email address	If the email address (ADR6-SMTP_ADDR) is blank		PF2/WP2
3011-009		Telephone Extension maintained without Telephone number	If the Telephone number (ADR2-TEL_NUMBER) is blank and Telephone Extension (ADR2-TEL_EXTENS) is not blank.		PF2/WP2
3011-010		Fax Extension maintained without Fax number	If the Fax number (ADR3-FAX_NUMBER) is blank and Fax Extension (ADR3-FAX_EXTENS) is not blank.		PF2/WP2
3011-011		Deduplication	Vendors with same email and Telephone should be unified to avoid redundant BP creation.	Syniti Match report for business to select golden record using parent and child approach.	PF2/WP2
<del>3011-012</del>		<del>Relevant vendors with no contacts</del>	<del>If LFA1 LIFNR does not exist in KNVK LIFNR.</del>		<del>PF2/WP2</del>

## Conversion Process

The high-level process is represented by the diagram below:

The ETL (Extract, Transform, Load) process is a structured approach to data migration and management, ensuring high-quality data is seamlessly transferred across systems. Here's a breakdown of its key components:

### 1. Extraction

The process begins with extracting metadata and raw data from source systems, such as Syensqo ECC system (i.e., WP2/PF2) periodically or from Data Collection Template (DCT). The extracted data is then staged for transformation.

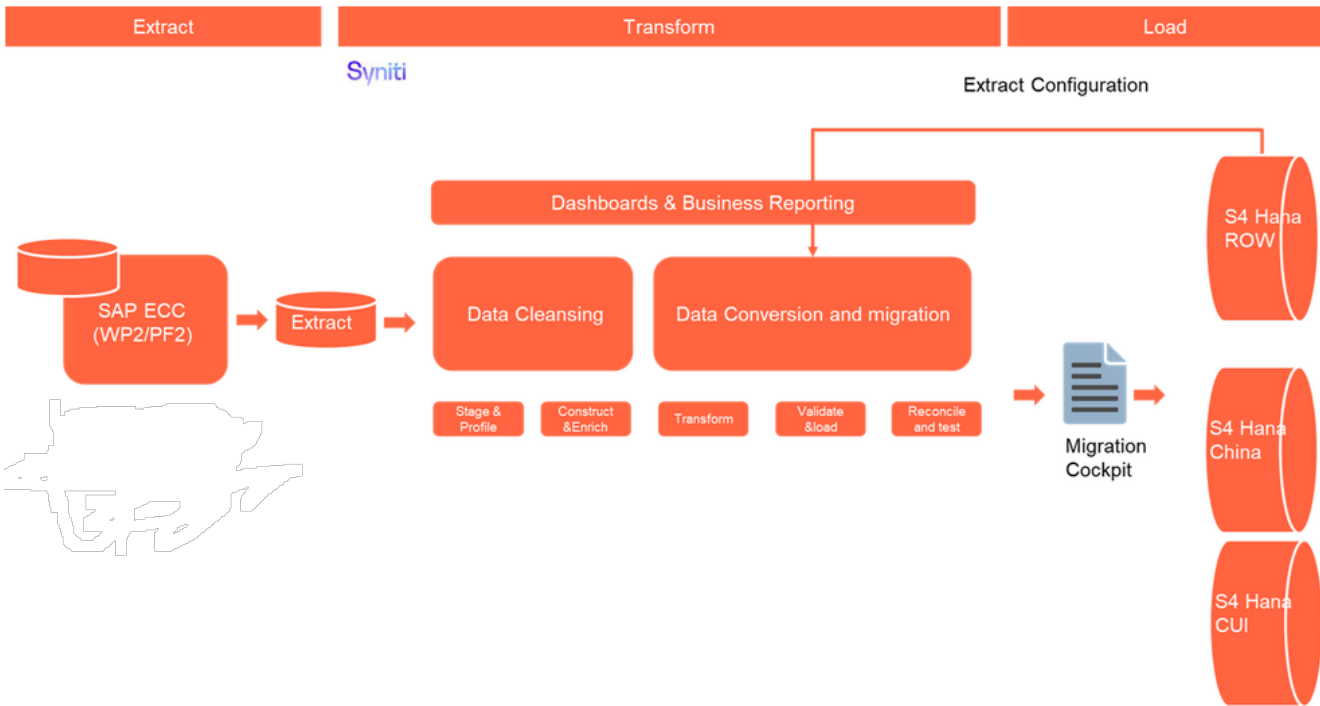

### 2. Transformation

Once extracted, the data undergoes cleansing, consolidation, and governance. This step ensures data integrity, consistency, and compliance with business rules. The transformation process includes:

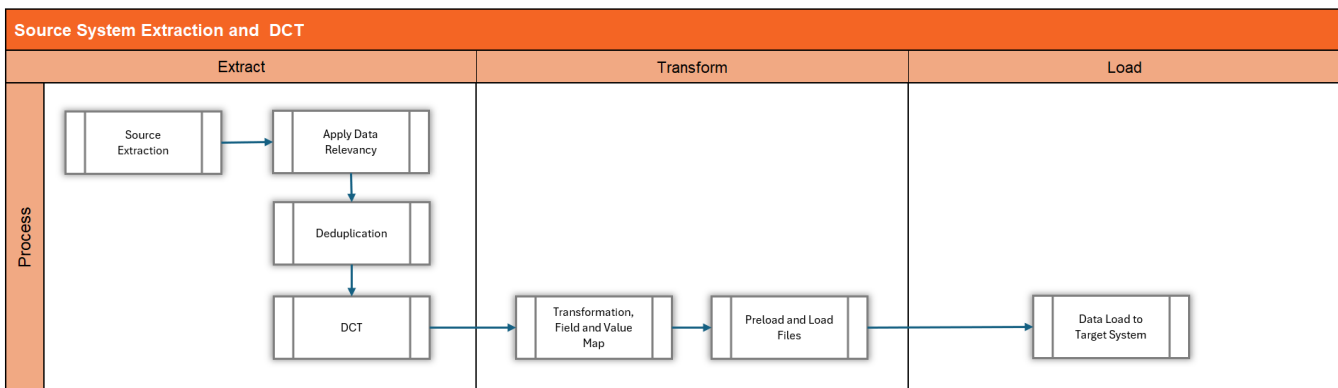

- Data validation to remove inconsistencies.
- Standardization to align formats across datasets.
- Business rule application to refine data for operational use.

### 3. Loading

The transformed data is then loaded into the target S4 Hana system.

The high-level process for Vendor contacts, where there is no source data or enrichment is required, is represented by the diagram below:

Note: Business will be required to enrich and approve the DCT records for contact names, telephone, department, function, etc. New contacts can also be added as well via the DCT.

## Data Privacy and Sensitivity

The object contains the exact contact information of a specific individual. This data must be handled with great care.

## Extraction

Extract data from a source into Syniti Migrate. There are 2 possibilities:

1. The data exists. Syniti Migrate connects to the source and loads the data into Syniti Migrate. There are 3 methods:
  - a. Perform full data extraction from relevant tables in the source system(s).
  - b. Perform extraction through the application layer.
  - c. Only if Syniti Migrate cannot connect to the source, data is loaded to the repository from the provided source system extract/report.
2. The data does not exist (or cannot be converted from its current state). The data is manually collected by the business directly in Syniti Migrate. This is to be conducted using DCT (Data Collection Template) in Syniti Migrate

The agreed Relevancy criteria is applied to the extracted records to identify the records that are applicable for the Target loads

## Extraction Run Sheet

Req #	Requirement Description	Team Responsible
1	<b>Extraction Scope Definition</b> - Identify the source systems and databases involved. - Define the data objects (tables, fields, records) to be extracted. - Establish business rules for data selection.	Syniti / (L2C/S2P) Data team

2	<b>Extraction Methodology</b> <ul style="list-style-type: none"> <li>- Specify the extraction approach (full, incremental, or delta extraction).</li> <li>- Determine the tools and technologies used.</li> <li>- Define data filtering criteria to exclude irrelevant records.</li> </ul>	Syniti
3	<b>Extraction Execution Plan</b> <ul style="list-style-type: none"> <li>- Establish execution timelines and batch processing schedules.</li> <li>- Assign responsibilities for extraction monitoring.</li> <li>- Document dependencies on other migration tasks.</li> </ul>	Syniti
4	<b>Data Quality and Validation</b> <ul style="list-style-type: none"> <li>- Define error handling mechanisms for extraction failures.</li> </ul>	Syniti

## Selection Screen

Selection Ref Screen	Parameter Name	Selection Type	Requirement	Value to be entered/set
SE16N	Contact person for in-scope customers	To select all contact person assigned to in-scope customers		Select all contact person from table KNVK Where KNVK-KUNNR is in object 3007 customer migration list.
SE16N	Contact person for in-scope customers partner function	To select all contact person assigned to in-scope customers under partner function		Select all contact person from table KNVP Where KNVP-KUNNR is in object 3003 customer migration list.
SE16N	Contact person for in-scope vendors	To select all contact person assigned to in-scope vendors		Select all email contacts from table ADR6 where vendor address ADDRNUMBER is in scope object in 3007-BP General.

## Data Collection Template (DCT for S2P Vendor)

Data Collection Template will be pre-populated from the legacy vendor's default email, address and telephone/fax numbers.

Field Name	Field Description	Rule
zApproved	Approval Flag	Checkbox (True or False)
zLegacyLIFNR	Legacy Vendor	Legacy or DCT Vendor Number
zLegacyPARTNER	Legacy BP Contact	Legacy Address+sequence number or DCT Contact Number
BU_GROUP	GROUPING	Default : BP09
TITLE	TITLE	Must be a valid Title in TSAD3
NAME_FIRST	First Name	Must not exceed 40 chars. Parse first name from default Email.
NAME_LAST	Last Name	Must not exceed 40 chars. Parse last name from default Email.
SMTP_ADDR	E-MAIL (ADR6)	Must be a valid email
LANGU_CORR	CORRESPONDENCE LANGUAGE (LFA1)	Must be a valid language in T002
PAVIP	VIP	Must not exceed 1 char
ABTNR	Department	Must be a valid Department in TB910
PAFKT	Function	Must be a valid Function in TB912
PAAUTH	Partner's Authority	Must not exceed 1 char
PAREM	Notes for Partner	Must not exceed 40 chars
BU_SORT1	SEARCH TERM 1 (ADRC)	Must not exceed 20 chars
BU_SORT2	SEARCH TERM 2	Must not exceed 20 chars
STR_SUPPL1	STREET 2	Must not exceed 40 chars
STR_SUPPL2	STREET 3	Must not exceed 40 chars
STREET	STREET NAME	Must not exceed 40 chars
STR_SUPPL3	STREET 4	Must not exceed 40 chars
LOCATION	STREET 5	Must not exceed 40 chars
CITY2	DISTRICT	Must not exceed 20 chars
POST_CODE1	POSTAL CODE	Must not exceed 10 chars
CITY1	CITY	Must be a valid City in the Country

COUNTRY	COUNTRY	Must be a valid Country in T005
REGION	REGION	Must be a valid Region in T005S
PO_BOX	PO BOX	Must not exceed 10 chars
TEL_NUMBER	TELEPHONE (ADR2)	Must be numeric
TEL_EXTENS	EXTENSION	Must be numeric
MOBILE_NUMBER	MOBILE PHONE	Must be numeric
FAX_NUMBER	FAX (ADR3)	Must be numeric
FAX_EXTENS	EXTENSION	Must be numeric
REMARK	COMMENTS (ADRCT)	Must not exceed 50 chars

## Extraction Dependencies

Item #	Step Description	Team Responsible
1	<b>Source System Availability</b> <ul style="list-style-type: none"> <li>Ensure that the source database or application is accessible.</li> <li>Confirm that necessary credentials and permissions are granted</li> </ul>	Syensqo IT
2	<b>Data Structure</b> <ul style="list-style-type: none"> <li>Identify relationships between tables, views, and stored procedures.</li> </ul>	Syniti
3	<b>Referential Integrity</b> <ul style="list-style-type: none"> <li>Ensure dependent records are extracted together.</li> </ul>	Syniti
4	<b>Extraction Methodology</b> <ul style="list-style-type: none"> <li>Define whether extraction is full, incremental, or delta-based.</li> <li>Establish batch processing schedules for large datasets.</li> </ul>	Syniti
5	<b>Performance and Scalability Considerations</b> <ul style="list-style-type: none"> <li>Optimize extraction queries to prevent system overload.</li> <li>Ensure network bandwidth supports data transfer volumes.</li> </ul>	Syniti
6	<b>Security and Compliance</b> <ul style="list-style-type: none"> <li>Adhere to regulatory standards for sensitive information if applicable</li> </ul>	Syniti
7	<b>For S2P Vendors</b> <ul style="list-style-type: none"> <li>Obtain DCT Sign-off from Business</li> </ul>	S2P Data Team

## Transformation

The Target fields are mapped to the applicable Legacy field that will be its source, this is a 3-way activity involving the Business, Functional team and Data team. This identifies the transformation activity required to allow Syniti Migrate to make the data Target ready:

- Perform value mapping and data transformation rules.
  - Legacy values are mapped to the to-be values (this could include a default value)
  - Values are transformed according to the rules defined in Syniti Migrate
- Prepare target-ready data in the structure and format that is required for loading via prescribed Load Tool. This step also produces the load data ready for business to perform Pre-load Data Validation

## Transformation Run Sheet

Item #	Step Description	Team Responsible
1	Transformation Scope Definition <ul style="list-style-type: none"> <li>Identify the source and target data structures.</li> <li>Define business rules for data standardization.</li> <li>Establish data cleansing requirements to remove inconsistencies.</li> </ul>	Data Team, Functional Team

2	Data Mapping and Standardization - Align source fields with target fields. - Ensure unit consistency (e.g., currency, measurement units)	Data Team, Functional Team
3	Business Rule Application - Implement data enrichment/collection if applicable - Apply conditional transformations based on predefined logic/business rules	Data Team, Functional Team
4	Transformation Execution Plan - Define batch processing schedules. - Assign responsibilities for monitoring execution. - Establish error-handling mechanisms	Syniti
5	Configure transformation rules in Syniti Migrate (including calculated fields, formatting rules, etc.)	Data Team (Syniti), Data Team (L2C/S2P)
6	Review transformation logic and mappings with Business for confirmation	Business Team + Functional Team (L2C/S2P)
7	Perform initial transformation run and generate draft target-ready dataset	Data Team (Syniti),
8	Review draft target-ready data for structure and completeness	Data Team (L2C/S2P), Functional Team (L2C/S2P)
9	Share transformed data with Business for Pre-load Validation	Business Team
10	Incorporate feedback from Business and refine mappings or transformation logic as needed	Data Team (L2C/S2P)
11	Finalize and approve transformed data as Target Ready Load File	Business + Functional (L2C/S2P) + Data Team (L2C/S2P)
12	Handover final file to Load Team or trigger the load via Syniti Load Workbench	Data Team (Syniti)

## Transformation Rules (L2C)

1. Connection key to ADRC is KNVK-ADRND and ADRC-ADDRNUMBER.
2. Connection key to ADR2, ADR3 and ADR6 is KNVK-PSRNR and ADRX-PERSNUMBER.

Rule #	Source system	Source Table	Source Field	Source Description	Target System	Target Table	Target Field	Target Description	Transformation Logic

## Transformation Mapping

[Transformation Mapping Document Link](#)

Mapping Table Name	Mapping Table Description
MAP_LAND1	COUNTRY
MAP_REGION	REGION
MAP_LZONE	TRANSPORTATION ZONE
N/A for Vendor	

## Transformation Dependencies

List the steps that need to occur before transformation can commence

Item #	Step Description	Team Responsible
1	Source Data Integrity - Ensure extracted data is complete, accurate, and consistent. - Validate that data types and formats align with transformation requirements.	Syniti
2	Referential Integrity - Ensure dependent records are transformed together or in advance	Syniti
3	Transformation Logic and Mapping - Define data mapping rules between source and target schemas.	Data Team
4	Performance and Scalability Considerations - Optimize transformation processes for large datasets. - Ensure system resources can handle transformation workloads	Syniti
5	Logging and Error Handling - Maintain detailed logs of transformation activities. - Define error-handling procedures for failed transformations	Syniti

## Pre-Load Validation

### Project Team

The following pre-load validations will be performed by the Project Team.

### Completeness

Task	Action
Validate the record count	Verify that the data extracted from the legacy system or DCT is complete and accurate by comparing record counts and contact person against the source system
Validate the mandatory fields	Validate there is value for all the mandatory fields

### Accuracy

Task	Action
Validate the transformation	Verify that all transformation rules have been correctly applied and that transformed fields display the expected target values
Validate the extraction	Verify that all copied fields accurately reflect the source system values to ensure the extraction process has correctly transferred the data.

## Business

The following pre-load validations will be performed by the Business.

### Completeness

Task	Action
Validate the record count	Verify that the data extracted from the legacy system or DCT is complete and accurate by comparing record counts and contact person against the source system
Validate the mandatory fields	Validate there is value for all the mandatory fields

### Accuracy

Task	Action
Validate the transformation	Validate the fields which require transformation have the value after transformation instead of the original field value
Validate the extraction	Verify that all copied fields accurately reflect the source system values to ensure the extraction process has correctly transferred the data.

## Load

The load process includes:

1. Execute the automated data load into target system using load tool or product the load file if the load must be done manually
2. Once the data is loaded to the target system, it will be extracted and prepared for Post Load Data Validation

### Load Run Sheet

Item #	Step Description	Team Responsible
1	Load Scope Definition - Identify the target system and database structure. - Define data objects (tables, fields, records) to be loaded. - Establish business rules for data validation.	Data team
2	Load Methodology - Specify the loading tools and technologies (Migration Cockpit, LSMW, custom loading program).	Syniti
3	Data Quality and Validation - Ensure data integrity checks (null values, duplicates, format validation). - Perform pre-load validations to verify completeness. - Define error handling mechanisms for load failures	Syniti
4	Load Execution Plan - Establish execution timelines and batch processing schedules. - Assign responsibilities for monitoring execution. - Document dependencies on other migration tasks	Syniti
5	Logging and Reporting - Maintain detailed logs of loading activities. - Generate summary reports on loaded data volume and quality. - Define escalation procedures for errors	Syniti

## Load Phase and Dependencies

### Configuration

Item #	Configuration Item
1	Role BUP001 is configured and valid in the target system in table TB003

## Conversion Objects

Object #	Preceding Object Conversion Approach
3003	Business Partners - Customer (Sales and Service) - FLCU01
3007	Business Partners - General (Role 000000)
3026	Business Partners - 3rd Party Suppliers-FLVN01

## Error Handling

Error Type	Error Description	Action Taken
1	The value XXX for field XXX doesn't exist	<ol style="list-style-type: none"> <li>1. Check the mapping/conversion is done properly in the loading file</li> <li>2. Validate the target value is configured/transported in the target system</li> <li>3. Reach out to function team to validate the configuration</li> </ol>
2	There is mandatory field XXX missing	<ol style="list-style-type: none"> <li>1. Validate MDS if the fields are set as mandatory</li> <li>2. Validate if there is value in the pre-loading file</li> <li>3. Validate if the configuration for the mandatory fields are done properly</li> </ol>

## Post-Load Validation

### Project Team

### Completeness

Task	Action
Validate Record count in the backend	Validate the main tables BUT100 is loaded.
Display Records	Pick up few random BP numbers, and Run the BP Report to validate the BUP001 information can be displayed without any error

### Accuracy

Task	Action
Check values in key fields for accuracy	<p>Post-load reports will have the same structure as the load file and some additional columns as required to facilitate the post load validation.</p> <p>Leverage on tool to create a Post Load report that reports S/4HANA loaded records along with the legacy values side-by-side to allow for 100% check of all these fields in the shortest possible time.</p> <p><u>Any</u> mismatch will be reported under the Post Load - Error report.</p>

## Business

### Completeness

Task	Action
Record Count Check	Review the record count report from the Data Team and ensure it is correct by cross-checking with the record count confirmed during Pre-load Business Validations

## Accuracy

Task	Action
Spot check	Business should choose some business partners, display the contact person with transaction code "BP" and perform comprehensive check on all loaded details

## Key Assumptions

- Master Data Standard is up to date as on the date of documenting this conversion approach and data load.
- 3011 is in scope based on data design and any exception requested by business.
