

6. Catalog Lead Time

For the functional information about this Lead time, please visit this section [here](#).

Catalog LT in DynaSys:

This tab only shows Finish Goods & Intermediates (i.e., "Valuation Class final" <> Raw Materials).

Note: if during the same session user has changed/adjusted the "Proposed Valuation Class for P&I", we recommend either pressing F5 (refresh) to refresh the view in the "Catalog LT" tab, or "Reload" button to load the full workspace again.

The screenshot shows the '6. Catalog Lead Time' tab in the DynaSys application. The table displays material data with columns for Material, SKU, Valuation class final, Catalog lead time SAP [Day], CLT Proposed [Day], CLT Wished [Day], CLT Agreed [Day], and Catalog LT final [Day]. The data includes various materials like AEROFROTH, AEROFLOAT, and AERODRI, with their respective SKUs, valuation classes, and lead times.

Material	SKU	Valuation class final	Catalog lead time SAP [Day]	CLT Proposed [Day]	CLT Wished [Day]	CLT Agreed [Day]	Catalog LT final [Day]
143458R	AEROFROTH 70 160KG 353LB PE TH DR 7723 Atequiza	Z150R CS Finished Products	17			17.00	17.00

- **Valuation Class final:** considered Valuation Class in the P&I
- **Catalog Lead Time from SAP:** current Catalog LT from SAP (MRP2 view).
- **CLT Proposed:** will be calculated outside DynaSys, with a formula in the xls file, taking into account the median historical CALT and the wished CALT
- **CLT Wished:** will be calculated outside DynaSys, the market put this number as an input in the xls file shared with them.
- **CLT Agreed:** result from the conversations with the market, review sku by sku
- **Catalog LT final:** considered Catalog LT for the decision tree. CLT final = CLT Agreed if there is one, if not it will be equal to the CLT SAP.

Note: in order to mass upload the "CLT Agreed", user can use the [Export/Import Microsoft Excel functionality](#).
