

13. Embed IFrames

Overview

Drupal lets to add content as an IFrame like Keepeek Slideshows, Google Maps etc

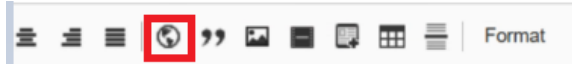

Table of content

- [Step-By-Step](#)

Step-By-Step

STEP 1

Click on IFrame icon(Globe symbol)

STEP 2

We have to define different properties :

- Source-URL
- Width or height of iframe, allowed: numbers (in px, without "px") btw. percents (e. g. "70%")
- Title, optionally
- Attributes for "frameborder" and "scrolling" (selects)

Iframe Properties

URL

Width **Height** **Alignment**
 Enable scrollbars **Show frame border**
Name **Advisory Title**
Long Description URL

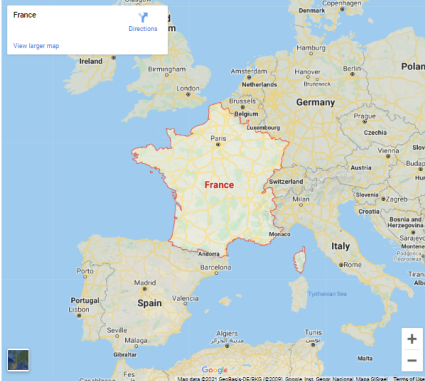

STEP 3

Example of an Iframe embed in an article

Iframe Example

i Good To Know

If you are adding a component from Keepeek, you can find its height and width in its URL.
