

# Filter dashboard using variables

1. Create a combo box chart by dragging it into the screen.
2. Set up the list of values of the combo box.
3. Take note the name of the combo box (right click on the combo box and click on *Properties*). You can of course change the default name.

4. Right click on the chart you want to hide/show and click on the *Properties* button
5. Set the properties *Visible* as follows: `=parameter.ComboBoxName == 'VALUE_TO_SHOW'`
