| ◦ Appendix 6 – Required Documentation for Material Maintenance Requests Based on the Type of Change ..... | 38 |

## 1 PURPOSE

This work instruction describes the process for maintaining (creation, changes) in SAP for the following material types including samples:

- Produced Materials;
- Procured Materials;
- Capitalized Spares for Projects;
- Spares (Repairs and Consumables, MRO);
- Service Items, Manufacturer Part Numbers;
- Non Stock Material;
- Returnable Packaging items;
- Non valuated

## Process Flow

**Finished Goods/Intermediates creation** (Material Type: ZPRO)

### Finished Goods/Intermediates change (Material type: ZPRO)

### Factory Goods creation (Procured Materials) (Material type: ZROH, ZHBE, ZUNW, ZLAG, ZHRS)

### Factory Goods change (Procured Materials) (Material type: ZROH, ZHBE, ZUNW, ZLAG, ZHRS)

## 2 Process description

Requestor (can be from various functions, for example R&D, planning, etc.) initiates business request and submits it to the Plant Data Steward depending on:

- Area of responsibility (to be determined by the type of material to be set up)
- Plant

Process step by step:

1. Plant Data Steward and/or product steward submits a request to PSRA for MSDS (if required), HTS and ECCN codes.

2. Plant Data Steward submits a request to Data Management (providing a filled out Request Form) to set up a global view (at this time the material is also temporarily blocked until all local views have been created). We make sure that there are no duplicates already existing in the system, and if all required data has been provided, set up the Global view as requested. Then the DM ticket is closed and the Plant Data Steward receives a notification that the Global view is completed.
3. Plant Data Steward gathers all information required for the local views (using the Collection form).
4. Plant Data Steward populates all the collected data for the local views.
5. Plant Data Steward advises Manufacturing, QM, Procurement and Logistics that a new item has been created so they can set up additional data (BOMs, routings, inspection plans, QIR's, Source List, etc.)
6. Once all additional data is created, the Plant Data Steward advises Finance that a new item was created.
7. Finance runs Costing.
8. Plant Data Steward then releases the block.

Data Governance is responsible for material maintenance process and its changes.

## 3 MATERIAL CREATION

### 3.1. Preliminary checks and request validation

- All requests to maintain (create, change) any material codes should come from and be approved by the appropriate Plant Data Stewards. Please check appendix 1 to validate requestor.
- Request form should be provided or approved by the plant data steward and attached to the request in Freshdesk ticketing system. Verify if all mandatory fields in the request form are filled out. In case if request form is missing mandatory data, put ticket on "waiting" status, return to the requestor and ask to take appropriate action.

### 3.1. Check for potential duplicates - MM03

Transaction: **MM03** - view material master

By pressing multiple choice button, user receives pop-up window with search options for material master

Insert the search value in \* \* and replace any spaces or special characters with \* to get the exact value or wording in any description or numbering in the System, whether that is a part of a larger description or wording or the exact same.

Material Number (1)

Material Number/Material Description

Material by old material number

Material description

✖

=

EN

Material

Maximum No. of Hits

Press Enter.

If you find an existing material but its description, double click on the material and compare information with information provided in the request form. If material data match the data in the form or there is a few differences, go back to the requester. But if you didn't find matching records, proceed with new material creation.

### 3.1.3 Create material - MM01

Request for new material should mainly be received from Plant Data Stewards, in case if it comes from another person, an approval should be granted prior processing the request (please refer to the Plant Data Steward reference table in **Appendix – List of Plant Data Stewards for both Structural and Process Materials**).

Transaction: **MM01** - create new material

| Field                       | Description                                                                                                                                                                                                                         | Value                     |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Internal description</b> | Used for Cytec. Maximum amount of symbols - 40 (has to be maintained for different languages, see below). Must be populated for all materials entered in the system                                                                 | Check the form            |
| <b>Base UoM</b>             | Mandatory for all materials. Unit of measure in which stocks of the material are kept and managed. SAP converts all quantities in other (alternative) UoM to the base unit of measure.<br><br>Cytec uses 5 BUoM - EA, KG, L, M, M2. | Check the form            |
| <b>Division</b>             | Used to group materials and products. System uses divisions to determine the sales and the business areas. Cytec will have 4 divisions: Aerospace, Industrial, In Process Separation (IPS), Additive Technologies (AT).             | <b>Currently not used</b> |
| <b>X-plant matl status</b>  | Restricts the usability of a material for all plants. Ensure that for new materials status is always BLOCKED (status 20 or 30, as requested).                                                                                       | 20 / 30 / as requested    |
| <b>Material group</b>       | Used to group materials with similar attributes                                                                                                                                                                                     | Check the form            |

|                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                                                                                                          |

Leave blank.

#### GLOBAL DATA: Classification

Classification is a cross application component in SAP that allows addition of attributes to master data objects and to hold that information to be used for reporting, searching, applying prices, print this information, etc.

## 5 DEACTIVATE/ACTIVATE

- Plant data Steward submits request to GBS if deactivation/reactivation is GLOBAL by coordinating with Local data stewards from MFG, Logistics, QM and FI
- If deactivation/reactivation is LOCAL, it is done by the plant data steward (by coordinating with Local data stewards from MFG, Logistics, QM and FI)

### For global deactivation change the following values of the Material:

|                  |                                  |                      |                                                                                                                 |
|------------------|----------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------|
| Transaction MM02 | Basic Data 1 view                | Internal description | add <b>*OBS*</b> with one space in front of the material description<br>E.g.: *OBS* AT-FLSHB-2R-GRN-25-25-66-SL |
|                  | Basic Data 1 view                | X-plant Matl Status  | default value 10                                                                                                |
|                  | MRP 1                            | Plant Sp Matl Status | default value 10                                                                                                |
|                  | MRP 1                            | MRP Type             | ND                                                                                                              |
| Transaction MM06 | Flag for deletion for all plants |                      |                                                                                                                 |

### For local deactivation change the following values of the Material:

|                  |                                                       |                      |                  |
|------------------|-------------------------------------------------------|----------------------|------------------|
| Transaction MM02 | MRP 1 view and on Purchasing view)                    | Plant Sp Matl Status | default value 10 |
|                  | MRP 1                                                 | MRP Type             | ND               |
| Transaction MM06 | Flag for deletion in MM06 only for requested plant(s) |                      |                  |

### Deactivation in MM06:

- Go to MM06
- Enter the material number ( additionally specific plant/ Stor.location/ Sales org./ Distr. Channel/ Warehouse Nr can be selected), press „Enter“

**Flag Material for Deletion: Initial Screen**

|                |         |
|----------------|---------|
| Material       | 1000350 |
| Plant          |         |
| Stor. Location |         |
| Valuation Type |         |
| Sales Org.     |         |
| Distr. Channel |         |
| Warehouse No.  |         |
| Storage Type   |         |
| Change Number  |         |

- Select the material to be set for deletion flag
- In case of removing deletion flag, the user should uncheck the box next to the Material number, press „Save“

**Flag Material for Deletion: Data Screen**

P.S. It is possible to deactivate/activate materials for specific Plant/ Stor.location/ Sales org./ Distr. Channel/ Warehouse Nr, that is usually performed by the Plant Data Steward

## 8 CREATING MATERIAL WITH REFERENCE

Materials can be created using reference material (already existing one). The system will copy all the information from the old to the new one except:

- Quality management 'Inspection Setup' checkmark
- Buyer group

**Create Material (Initial Screen)**

Select View(s)   Org. Levels   Data

Material:

Industry sector: Z CYTEC Industries

Material Type: ZPRO Produced Ma...

Change Number:

Copy from...

Material: 1000853

**QE2(1)/230 Organizational Levels**

| Organizational levels |                           | Copy from |
|-----------------------|---------------------------|-----------|
| Plant                 | 2010 Manchester           | 2010      |
| Stor. Location        | 0001 Dir-Raw Material     | 0001      |
| Sales Org.            | 7223 Cytec IM (Manch) Ltd | 7223      |
| Distr. Channel        | 00 Cytec Distribution     | 00        |
| Warehouse No.         | W03                       | W03       |
| Storage Type          |                           |           |

**Profiles**

MRP profile:

☐ Org. levels/profiles only on request

- Go to MM01
- Indicate "Industry Sector" and "Material Type" and "Copy from.."
- Select material views
- Select organizational levels to be copied

## 6 LIST OF MULTIPLE STORAGE LOCATIONS - MMSC

**Enter Storage Locations Collectively: Initial Screen**

Material.: 1000350

Plant.....: 2065

**List control**

☒ List all existing storage locations  
☐ List extendable storage locations only

☐ Create change documents

- In order to list multiple Storage locations to specific material/plant combination, indicate the material number, plant and select: „list extendable storage locations only“, press – „Enter“

**Enter Storage Locations Collectively: List**

Delete

More than 500 input options

In order to Search material by any value in the Classification view, please use "Materials for Class" search option.

First of all the user has to know which Classification class contains the necessary value, e.g., "Old Material number" is in Engineering Class – ZCYMC\_ENGR\_MAT

- Select "Materials for Class" search option
- Select the relevant Classification Class and Class type 001

**Find Objects in Classes**

Find in initial class    Include subordinate classes    Reselect    Filter    Refresh

Initial Class

Class: ZCYMC\_ENGR\_MAT

Class Type: 001

- Insert the look-up value in \*\* and select "Find in initial class". The system will give out search results in the box below

**Find Objects in Classes**

Find in initial class | Include subordinate classes | Reselect | Filter | Save

Class Hierarchy

- 001 ZCYMC\_ENGR

Initial Class

Char.

General

| Characteristic Description | Value | T |

## Appendix 4 – Material number ranges

| Material Type Description    | SAP Material Type | Assigned Number Ranges   |
|------------------------------|-------------------|--------------------------|
| Produced Materials.          | <b>ZPRO</b>       | <b>1000000 - 3999999</b> |
| Procured Materials           | <b>ZROH</b>       | <b>4000000 - 6999999</b> |
| Factory Goods                |                   | <b>7000000 - 9999999</b> |
| 1) Capitalized Spares        | <b>ZUNW</b>       |                          |
| 2) Spares                    | <b>ZHBE</b>       |                          |
| 3) Service Item              | <b>ZDEN</b>       |                          |
| 4) Manufacturing Part Number | <b>ZHRS</b>       |                          |
| 5) Non-Stock Material        | <b>ZLAG</b>       |                          |
| 6) Returnable Packaging      | <b>ZLEH</b>       |                          |

## Appendix 5 – Material type definition

| Description                                          | Material Type Definition                                                                                                                                                                                          |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Produced Materials (ZPRO)                            | Finished Goods and Intermediate items<br>Valuated = Yes<br>Tracked in Inventory = Yes                                                                                                                             |
| Procured Materials (ZROH)                            | Raw Materials, Re-sale Items, Packaging (included in Production BOM)<br>Valuated = Yes<br>Tracked in Inventory = Yes                                                                                              |
| Non-Valuated Materials (ZUNW)                        | Non-Valuated Materials, such as Capitalized Spares for Projects, with inventory tracking.<br>Valuated = No<br>Tracked in Inventory = Yes                                                                          |
| Spares (Consumable Supplies, MRO) (ZHBE)             | MRO (Maintenance/Repair/Operating) materials, Consumable Supplies, Engineering Spares, etc.<br>Valuated = Yes<br>Tracked in Inventory = Yes                                                                       |
| Service Items (ZDEN)                                 | Services provided to customers, such as Annual Fee in MSA contracts, Miscellaneous Charges, Testing Fee, etc.<br>Valuated = Yes<br>Tracked in Inventory = No                                                      |
| Manufacturer Part Numbers (ZHRS)                     | Used by Procurement & Quality; Manufacturer Part Number materials are set up as children assigned to Parent Raw Materials; created to manage manufacturer contracts<br>Valuated = No<br>Tracked in Inventory = No |
| Non-Stock Material (Consumable Supplies, MRO) (ZLAG) | MRO (Maintenance/Repair/Operating) materials, Indirect (non-production/non-BOM) procured materials, such as Office Supplies and other Consumable Supplies<br>Valuated = No<br>Tracked in Inventory = No           |
| Returnable Packaging (ZLEH)                          | Returnable Cylinders<br>Valuated = No<br>Tracked in Inventory = Yes                                                                                                                                               |

## Appendix 6 – Required Documentation for Material Maintenance Requests Based on the Type of Change

| Type of set up/change                                                                                                                                                                                                                                               | Plant data steward approval required?                    | Required documentation/information                                          | Responsible party                             |
