How does the report work ?

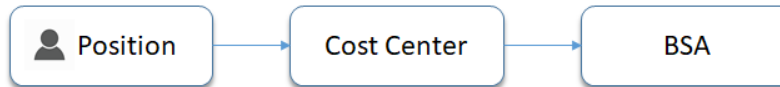

The cost center is used as a unique key between Finance database and HR database.

The report is based on postings done on cost centers.

Each headcount are linked to a cost center in the HR database

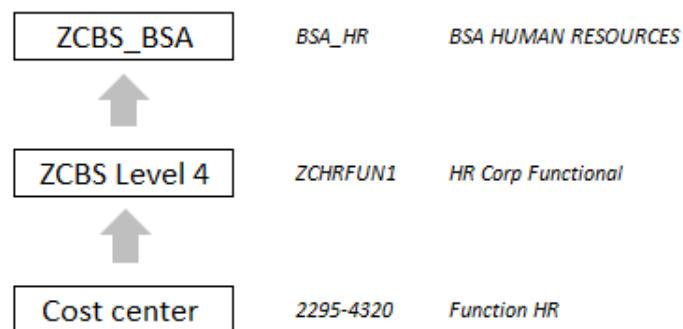

Assignment of a cost center to a BSA

A cost center is assigned to a unique BSA => **One** cost center = **One** single BSA.

- All cost centers are assigned to a group (level 4) of the [ZCBS hierarchy](#) and some groups (level 4) of the [ZCBS hierarchy](#) are assigned to a BSA through another hierarchy ZCBS_BSA. (For instance the cost center 2295-4320 Function HR is included in the group ZCHRFUN1 of the [ZCBS hierarchy](#) that is itself included in the group BSA_HR of the ZCBS_BSA hierarchy. Then the cost center 2295-4320 is assigned to the BSA Human Resources.)

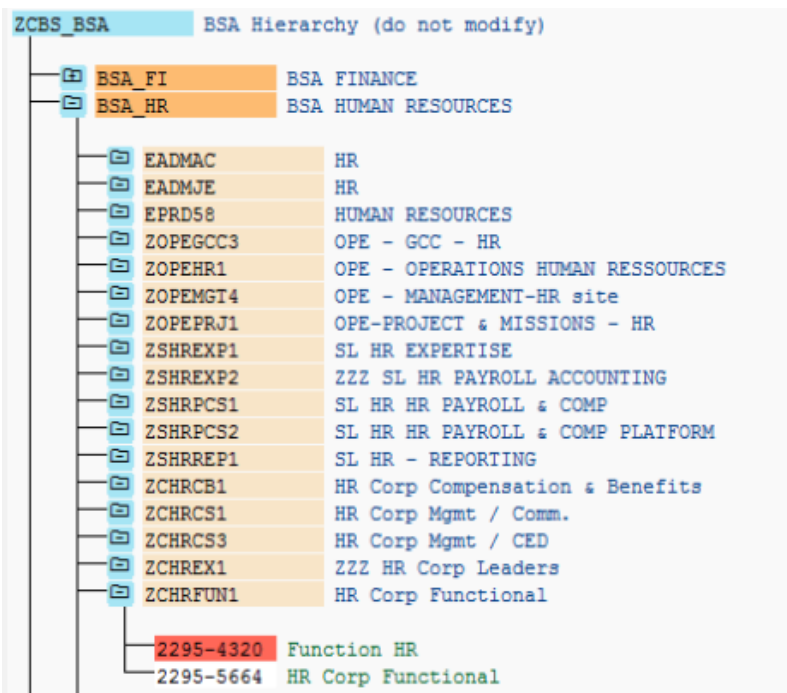

Example

Where to find the ZCBS_BSA hierarchy ?

- File** : A file is available in gdrive [here](#) (be careful it may not be the very last version, it is always better to look at the data directly in SAP or BW)
- In SAP**

Run the transaction [KSH3 - Display cost center hierarchy](#) in WP1 with the [controlling area](#) Z013, and enter ZCBS_BSA.

- In BW** : Use the report [FC - Cost centers master data](#) to get an updated list of cost centers assigned to each BSA

How to improve the accuracy of the BSA reporting?

- **Headcount update**

If the headcount is linked to a wrong cost center you can update this cost center by using a freshdesk ticket -->Go to Freshdesk / HR Request / System updates / eWS NGA.

- **Cost center update**

If your cost center is linked to a wrong node in the ZCBS hierarchy, you can update it by submitting a [workflow through PF1](#) .
