

CONVAL

CONVAL is a software created by the company **F.I.R.S.T** which integrates extensive calculation functions for components and processes in industrial systems, based on tested and tested methods such as **DIN, VDI, VDMA EN / ISO** and **ISA**. The range of calculations available ranges from control valves and acceleration elements through piping systems to heat exchangers, including integrated property calculations (based on a property database) and comprehensive databases for control valves, safety valves, materials etc.

Therefore, **CONVAL** covers all process design and instrumentation requirements in **FEED** projects, as well as in basic engineering, maintenance or renovation projects.
Conval is available on 3 sites, Belle Etoile (Saint Fons) in France, NOH in Belgium and Panoli in India.
For other sites please contact SBS-IST-STREAM-AEI@solway.com.

The latest version that is running on Solvay is 10.2.16.
