

# PTW (Power Tools for Windows)

**PTW (Power Tool for Windows)** is a software developed by **SKM** used for electrical engineering analysis, where it allows the calculation of voltage drop and electrical sizing. With **PTW**, the user can generate better projects comparing alternatives quickly; improve accuracy with DAPPER's rigorous solution methods; save time by sharing a common project database and interface; improve consistency with standard design libraries; design safer systems by comparing a more secure system by comparing the calculation with short and continuous rating.
