

S3i

The **S3i** software developed by **Pred Engenharia** is applied to maintenance management, in our specific case, predictive maintenance, thermography inspections, electric motor inspections and battery inspections. Through the Client Station, users can upload or download maintenance routes to / from the mobile device. It is possible to insert the thermography images that have been recorded or notify possible damage / anomaly points in the electrical component.

S3i requests an IST station to run and 5 users can use on same time. It's just applied to Paulinia site.

For other sites please contact SBS-IST-STREAM-AEI@solway.com.
