

# PS2 system

## Step-by-step guide

This PS2 System is also called as SOLMAN System. PS1 system is obsolete hence PS2 system is came into picture. Compare to PS1, PS2 have very limited roles .

We can use the roles based on the request provided by the user.

The business roles present in the PS2 are :

- 1.SOLMAN-PS2-ISREP : It is like a basic role , we can assign these role mostly provided to the IS users. In this role does not required Manager approval.
- 2.SOLMAN-PS2-CHNGMGR: This role is called as change manager role. It is used for defines the scope, validates, prioritizes and monitors the change process. This role required Manager approval.
3. SOLMAN-PS2-STDCHMGR: This role is used for Standard change manager. This role required Manager approval
- 4.SOLMAN-PS2-RELMGR: This role is used for Release Manager only but it also required change manager. This role required Manager approval.
- 5.SOLMAN-PS2-CAB: This role is used for CAB only but it also required change manager. This role required Manager approval.
- 6.SOLMAN-PS2-ADMIN: This role is also called Admin role. It is used for Administrators only, we can't provide admin role to the users. But it requires release manager. This role required Manager approval.
