

Providing access to Verdant(DIV-ODYSSEY) users

- This article shows how to assign authorization to users who belongs to Verdant Speciality Solution.
- These users are not belong to Solvay.
- So we cannot assign any Business roles to them.
- System : WP1

Step-by-step guide

1. When any users request access for user creation or to a particular Transaction code in WP1 system, the foremost step is to check their Department and function to assign access.
2. Suppose if we find any user whose Department is DIV - ODYSSEY - NOVECARE they belong to Verdant Speciality solution not for solvay.
3. So we cannot assign any business roles to them , besides the roles ones with *ODY in them.

Notified to: subham.saurav-ext@solvay.com

Hello Subham,

This is a Verdant user, so they cannot receive roles **besides those ones with *ODY.**
We need to be extra careful when treating users from disinvestment cases, and this is not the first time.

I've assigned the correct access, please follow up with Barbara and remove the assigned business role.

Best regards.

4. These type of roles assigned as privilege roles, so we need to add a note to Gabriela Andrade (gabriela.andrade@solvay.com) to assign the ODY roles.
 5. Once the roles has been assigned by Gabriela , user will have the access.
 6. In this way we give authorization to users who belongs to DIV - ODYSSEY - NOVECARE.
- (Note: Its better to check every user in Google contacts to find their exact department and Job function)
