

This article is about giving the re-activation in SAP PF1 system of Rusvinyl users.

PF1 is the Production Environment.

Ticket :-

<https://sbs-support.solvay.com/a/tickets/6463374>

The problem in this ticket is that was requested to Reactivate of user RU40154, but the user has been globally locked on all systems since 28/11/2016.

99450564 - In Rusland (DEACTIVATED)

The problem is that in GUDSYS for the Personal Identification we had two users (one temporary user and the user RU40154 - same person).

Hello Sergey,

If I well understand your request, you would like to have SAP userid **RU40154** to be reactivated, correct?

Shraddha, should this user be transferred to a new Perrn?
Actually there is the old one 99450564, with no Manager/Supervisor and terminated.
And there is 52011799, for which the communication data is not yet completed. Can you please complete it?
Please let us know when it's done.
Thanks!

Giuseppe, **BATR9416** is a temporary userid and should not be used.

Normally when a user is deactivate globally and the reactivation is requested, the rule is that HTR creates a new user with new credentials.

Hello Sergey,

There are two things to consider

- 1- How long ago was the person in the company we try to cleanup accounts not used every 3 to 6 months.
- 2- If we give the same AD account the person will inherit the accesses they had before which is a security risk

James

Normally when a user has been globally deactivated for some time and the reactivation is requested, the rule is that HTR creates a new user with new credentials.

Since this change of userid was not appreciated to, after discussion with HTR has reactivated the userid RU40154.
