Co\$ta - Matrix Calculation PF1

>> Back to the [Co\\$ta project](#) home page

Because PF1 has the specificity of having mixed cost centers, the Matrix on COSTA works with a main rule and a specific rule.

Check [Matrix Scheme](#) for an overview of the process.

Mixed cost centers are all the cost centers which sub-nodes ends in "Y" on node EPRD from hierarchy ZCBS (check detail [here](#)).

Although the examples below are based on Pivot Matrix or Destination Matrix, meaning, final cost center (Pivot Object) to P&L (Final Destination) , the working method of the Allocation Matrix is the same for all allocations until final cost center (Pivot Object)

The main rule works for the non mixed cost centers as follows:
