

Overview

WPX system is one of the system which comes under Solstice Aero Project.

It contains the technical Information with US Military and Aerospace

Controlled Unclassified Information

The CUI data falls under below category :

1. ITAR - US International Traffic in Arms Regulations (Defense Products)
2. EAR - US Export Administration Regulation
3. NIST - National Institute of Standards and Technology

- ITAR Data needs to be stored in United State.US BOM Vault (US) connected to WP1 (in Europe)

Access to CUI data needs to be controlled according to user attributes (citizenship, work location...)

User who belongs to GBU Composite materials can have access CUI data

- **Solvay Composite Materials GBU has a broad list of documents containing CUI and therefore should be protected, some are:**

- Specifications
- Bill of Materials / Recipes
- Routings
- Product Composition
- Inspection Plan (Labware)
- Costing BOM

Note : There is no CUI data in WP1

- **SAP DAM by Nextlabs is the application selected to secure CUI data in the BOM-Vault**

SAP DAM is **a scalable data security solution that protects SAP. data in real-time**. Benefits include the following: Protect sensitive data. Leverage a transaction- and data-level access management system to secure access and protect data across all SAP applications.
