3. -US is Understood by the squad?
4. -US is feasible?
5. **-US impacts identified**
6. -US security addressed and validated? ??????
7. **-US has dependencies Identified? (New)**
8. **-US blockers are finished or can be done at same time (sprint)? (New)**
9. **-US is estimated?**
10. **-US is small enough? (New)**
11. **-US has acceptance criteria? (New)**
12. **-US within PI Planning Perimeter? (New)**
13. **-US will require non regression testing?**

INVEST Definition of Ready. (PBI = Product Backlog Item)

These considerations are often summarised as the "INVEST criteria", and they provide us with a useful Definition of Ready which can be applied to Product Backlog Items. By actively participating in Product Backlog refinement, a good Development Team will collaborate with the Product Owner in making sure that a standard such as this is observed.
I (Independent). The PBI should be self-contained and it should be possible to bring it into progress without a dependency upon another PBI or an external resource.
N (Negotiable). A good PBI should leave room for discussion regarding its optimal implementation.
V (Valuable). The value a PBI delivers to stakeholders should be clear.
E (Estimable). A PBI must have a size relative to other PBIs.
S (Small). PBIs should be small enough to estimate with reasonable accuracy and to plan into a time-box such as a Sprint.
T (Testable). Each PBI should have clear acceptance criteria which allow its satisfaction to be tested.
