General presentation:

In this page you have the possibility to build 100% custom reports with a specific perimeter chosen by you. You can create as many reports as you need and save them with bookmarks.

Pre-selected filters:

In the page there is by default a table that is pre-constructed:

- Dimension: System ID, Implementation Month/Year, Month Year loading
- Measure: Unweighted total.

Is that case it is a classic table, if you want you can click on an icon and change the table into a pivot table.

The pre-selected dimensions and measures are not fixed, you can remove them and add new ones. To do this you have two options:

- Select the dimensions and measurements in the two sections on the left side of the screen. If the background of one measure or dimension is colored that means it's selected.
- Click on the crosses of those you want to remove at the top of the table.

The screenshot shows the 'Initiatives' report interface. On the left, there are two sections: 'Dimensions' and 'Measures'. The 'Dimensions' section lists various attributes like Action Title, Benefit Impact, Budget Year, Calculation Rule, Cluster, Contributors, Country, Description, GBU, GBU vs CBS, Implementation Month Year, Macro-Portfolio, and Month-Year Loading. The 'Measures' section lists Unweighted Total, Weighted Total, and Impact. The main table displays data for 'Tata' with columns for System ID, Unweighted Total, Implementation Month Year, and Month Year Loading. The table is currently in a standard view, but there are icons at the top of the columns to switch to a pivot table view.
